1. The disclosure is objected to because of the following informalities: The application lacks a detailed disclosure of the invention, describing the structure that makes up applicant's novel device. It fails to include reference numerals that correspond to numerals indicated in the drawings. See US patent references cited.

Appropriate correction is required.

2. The drawings are objected to because the drawings are not consecutively numbered and lack reference numerals referring to elements of the invention. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. Claim 1 is rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

Applicant's claims are not numbered, therefore the features recited under "Invention claims" are considered to be one claim "Claim 1". In future, all claims must be numbered consecutively.

The claims must be in one-sentence form (each claim is one sentence only). Only the first letter of the first word of each claim is capitalized and a period is only at the end of claim.

Applicant's claim describes the benefits and function of the device, but fails to define the invention in terms of the combination of the structural features that make up the novel invention. Correction is required.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claim 1 is rejected under 35 U.S.C. 102(a and e) as being anticipated by Reese (PGPub 2004/0032112).

Reese shows a trailer tongue locator that facilitates ball hook up. It can fit with different hitches and includes a handle 38 for easy removal.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Johnson, Baskett, Fleming, Thompson, Anderson, and Ricles, include hitch guides using locator mounting members and a separate angled locator.

Woods and Schultz each show a hitch guide with a handle.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anne Marie M Boehler whose telephone number is 703-308-0422. The examiner can normally be reached on 7:30-5:00, Monday-Thursday, and alternate Fridays.
